

CHANGE IN 'INDOOR ENVIRONMENT' EDITORSHIP

Professor 'Max' Weetman has handed over editorship to Dr John Hoskins and continues as Publications Secretary. Dr Francis Roe writes:

The decision of **PROFESSOR D F WEETMAN ('MAX')** to resign from the Editorship-in-Chief of Indoor Environment cannot be allowed to pass without comment. It has been no mean feat to launch a new, high quality medico-scientific journal during a period of worldwide economic recession. Max succeeded not only in doing this, but also in seeing that all 12 numbers of the journal due to be published during its first two years were issued on time. Moreover, the contents of the journal have been commented on favourably by environmental scientists worldwide. Thus, Max is entitled to sit back in a glow of satisfaction at having been the "Founding Editor" of what is destined to be an important journal in the decades to come.

The new Editor-in-Chief, Dr John Hoskins, has been set a hard act to follow. However, his extensive knowledge of, and international involvement in, the field of inhalation toxicology should provide a magnet for the submission of high quality papers from leading scientists working in this field in countries around the globe.
