

Appendix Table L1 -

IESLC - Meta-analysis of Cigarette Smoking, only Filter vs only Plain (or nearest available)
Adenocarcinoma

This analysis is restricted to results for:

- 1) Results not by amount smoked
- 2) Results complete enough for use in metaanalysis

Within each study, results are then selected (in the following order of preference, within each sex) for:

- 3) CIGTYP: filter only/NOS, always, mainly, both, equally, ever
 - 4) DENOM: plain only/NOS, always, mainly, ever
 - 5) PRODUCT: cigarettes regardless of other products, cigarettes only (Note no study has both product definitions available)
 - 6) SMKSTA: ever, current. (Note no study has both ever and current available)
 - 7) LCtype: adeno or nearest available, but not squamous. (q = squamous, s = small, a = adeno, l = large, KII = Kreyberg II, al = alveolar, br = bronchiolar, u = undifferentiated)
 - 8) Race: all or nearest available, otherwise by race (wh or w = white, bl or b = black, hi = hispanic, ch = chinese, jap = japanese, haw = hawaiian, w+o = white + oriental, sca = scandinavian, as = asian)
 - 9) Followup period (prospective studies): whole study (coded as 0) or longest available
 - 10) For overlapping studies: principal rather than subsidiary studies
- Finally by Age: whole study (coded as 0) if available, otherwise by widest available age group and then for single sex results (m, f) in preference to combined sex results (c).

Results adjusted for the most potential confounders are then chosen in Sections -1 to -3 and result adjusted for the least confounders in Sections -4 to -6. (Results adjusted for an unknown number of confounder(s) are coded as 20.)

Section -7 shows excluded studies, together with the stage (as above) at which no qualifying results were found.

Section -8 lists the potentially overlapping studies which have been included (1=principal, 2=subsidiary), and any results which would have been included in preference except that they had incomplete data (i.e. were deselected at stage 2). It also lists their significance (yes/no), if known.

IESLC - Meta-analysis of Cigarette Smoking, ever Filter vs only Plain (or nearest available)
Adenocarcinoma
Potentially overlapping studies

REF	REFGP	PRINC2	OVERLAP/LINK
LUBIN2	LUBIN2	1	Lubin-combined
WYNDE5	WYNDE6	1	WYNDE5/6/7/8
WYNDE6	WYNDE6	1	WYNDE5/6/7/8

Appendix Table L3 -

IESLC - Meta-analysis of Cigarette Smoking, only Filter vs ever Plain (or nearest available)
Adenocarcinoma

This analysis is restricted to results for:

- 1) Results not by amount smoked
- 2) Results complete enough for use in metaanalysis

Within each study, results are then selected (in the following order of preference, within each sex) for:

- 3) CIGTYP: filter only/NOS, always, mainly, both, equally, ever
 - 4) DENOM: plain ever, mainly, always, only/NOS
 - 5) PRODUCT: cigarettes regardless of other products, cigarettes only (Note no study has both product definitions available)
 - 6) SMKSTA: ever, current (Note no study has both ever and current available)
 - 7) LCtype: adeno or nearest available, but not squamous. (q = squamous, s = small, a = adeno, l = large, KII = Kreyberg II, al = alveolar, br = bronchiolar, u = undifferentiated)
 - 8) Race: all or nearest available, otherwise by race (wh or w = white, bl or b = black, hi = hispanic, ch = chinese, jap = japanese, haw = hawaiian, w+o = white + oriental, sca = scandinavian, as = asian)
 - 9) Followup period (prospective studies): whole study (coded as 0) or longest available
 - 10) For overlapping studies: principal rather than subsidiary studies
- Finally by Age: whole study (coded as 0) if available, otherwise by widest available age group and then for single sex results (m, f) in preference to combined sex results (c).

Results adjusted for the most potential confounders are then chosen in Sections -1 to -3 and result adjusted for the least confounders in Sections -4 to -6. (Results adjusted for an unknown number of confounder(s) are coded as 20.)

Section -7 shows excluded studies, together with the stage (as above) at which no qualifying results were found.

Section -8 lists the potentially overlapping studies which have been included (1=principal, 2=subsidiary), and any results which would have been included in preference except that they had incomplete data (i.e. were deselected at stage 2). It also lists their significance (yes/no), if known.

IESLC - Meta-analysis of Cigarette Smoking, Hand-rolled vs Manufactured
Adenocarcinoma

This analysis is restricted to results for:

- 1) Results not by amount smoked
- 2) Results complete enough for use in metaanalysis

Within each study, results are then selected (in the following order of preference, within each sex) for:

- 3) CIGTYP: hand-rolled any, both, mainly, only
 - 4) DENOM: manufactured only ever, only current, any, ever
 - 5) PRODUCT: cigarettes regardless of other products, cigarettes only
 - 6) SMKSTA: ever, current
 - 7) LCtype: adeno or nearest available, but not squamous. (q = squamous, s = small,
a = adeno, l = large, KII = Kreyberg II, al = alveolar, br = bronchiolar, u = undifferentiated)
 - 8) Race: all or nearest available, otherwise by race (wh or w = white, bl or b = black, hi = hispanic
ch = chinese, jap = japanese, haw = hawaiian, w+o = white + oriental, sca = scandinavian, as = asian)
 - 9) Followup period (prospective studies): whole study (coded as 0) or longest available
 - 10) For overlapping studies: principal rather than subsidiary studies
- Finally by Age: whole study (coded as 0) if available, otherwise by widest available age group
and then for single sex results (m, f) in preference to combined sex results (c).

Results adjusted for the most potential confounders are then chosen in Sections -1 to -3
and result adjusted for the least confounders in Sections -4 to -6. (Results adjusted for an unknown number
of confounder(s) are coded as 20.)

Section -7 shows excluded studies, together with the stage (as above) at which no qualifying
results were found.

Section -8 lists the potentially overlapping studies which have been included (1=principal, 2=subsidiary),
and any results which would have been included in preference except that they had incomplete data
(i.e. were deselected at stage 2). It also lists their significance (yes/no), if known.
