

## Appendix G

### Example full meta-analysis output

[See Addendum p. 97 of Report I, and Appendix Table A1 of Report II for a revised version of this table]

Appendix Table G1 -

IESAST - Meta-analysis of Lifetime Exposure, Biochemical/Total (or Household, or Parent if Bio/Tot not available)  
Lifetime Asthma

This analysis is restricted to results for:

- 1) Lifetime asthma
- 2) Biochemical, total, household (overall), or parental exposure
- 3) Exposure during child's lifetime (also including parent ever smoker, but not specific in utero exposure or specific discontinued exposure)
- 4) Results not by amount of exposure
- 5) Results complete enough for use in metaanalysis

Within each study, results are then selected (in the following order of preference, within each sex) for:

- 6) EXPOS : biochemical, total, household, parent
- 7) BIOMEA : saliva, blood, urine
- 8) WHOPAR : any/unspecified parent, mother regardless of father, mother only, father regardless of mother, father only
- 9) WHESMO : during child's lifetime, ever (i.e. during smoker's lifetime), unspecified, at a specific age, current
- 10) UNEXSO : not specific parent, neither parent, none in household, none
- 11) UNEXTI : not at specified time, never (in smoker's lifetime), not at longer than specified time
- 12) UNEXHI : not exposed defined as smoked none, or smoked none+low
- 13) RACE : all in study or nearest available, otherwise by race
- 14) ONSET : yes, no (prevalence)
- 15) For overlapping studies: principal rather than subsidiary studies

Finally by Age: whole study if available, otherwise by widest available age group  
and then for single sex results (m, f) in preference to results for both sexes combined (b).

Results adjusted for the most potential confounders are then chosen in Sections -1 to -3  
and results adjusted for the least confounders in Sections -4 to -6. (Those least adjusted results which  
actually differ from the most adjusted are marked 'x' in column X in Section -4)

Section -7 shows excluded studies, together with the stage (as above) at which no qualifying  
results were found.

Section -8 lists the potentially overlapping studies which have been included (1=principal, 2=subsidiary),  
and any results which would have been included in preference except that they had data not complete enough  
for use in metaanalysis. It also lists their significance (yes/no), if known.
